LIMITATION

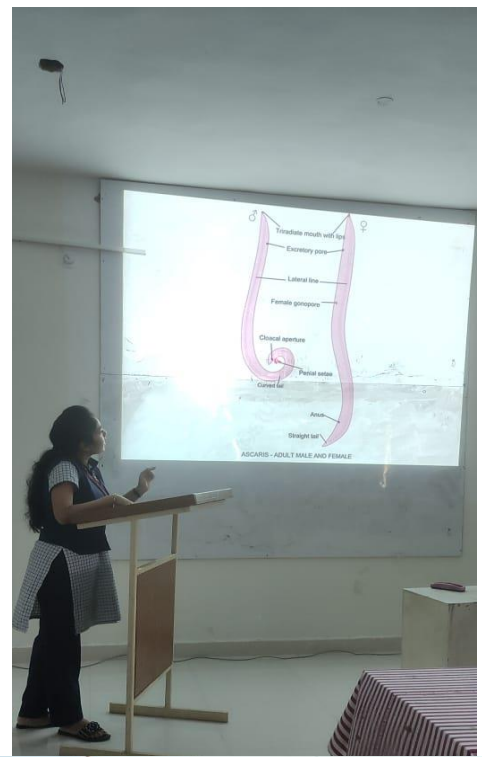

- ✦ Maintaining a uniform magnetic field over a large area of the disc is difficult.
- ✦ At high velocities relativistic variation of mass particle upsets the resonance condition.
- ✦ At high frequencies relativistic variation of mass of the electron is appreciable and hence electrons cannot be accelerated by cyclotron.
- ✦ It cannot be accelerated further because section do not have any charge.
- ✦ The energy of charged particles emerging from cyclotron is limited due to variation of mass with velocity.

$$m = \frac{m_0}{\sqrt{1 - v^2/c^2}}$$

✦ Where m_0 is the rest mass in the mass in motion.
